

Publish a Flutter Web App on GitHub Pages

Step 1: Create a new public repository

Create a new repository

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#).

Required fields are marked with an asterisk (*).

1

General

Owner *

fdg-2026

Repository name *

webtst

webtst is available.

Great repository names are short and memorable. How about [miniature-rotary-phone](#)?

Description

repository to publish the flutter web apps created during the training

70 / 350 characters

2

Configuration

Choose visibility *

Choose who can see and commit to this repository

Public

Add README

READMEs can be used as longer descriptions. [About READMEs](#)

Off

Add .gitignore

.gitignore tells git which files not to track. [About ignoring files](#)

No .gitignore

Add license

Licenses explain how others can use your code. [About licenses](#)

No license

Create repository

Step 2: Add a Readme file for a first commit

Quick setup — if you've done this kind of thing before

 Set up in Desktop or ☐ HTTPS ☐ SSH `https://github.com/fdg-2026/webtst.git`

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a **README**, [LICENSE](#), and [.gitignore](#).

README 

webtst

In this repository we will publish the flutter web apps that were created during our training in 2026.

Step 3: Enable GitHub Pages for the created repo

The screenshot shows the GitHub repository settings page for a repository named 'webtst'. The 'Settings' tab is selected and highlighted with a red box and a circled '1'. In the left sidebar, the 'Pages' option is highlighted with a red box and a circled '2'. The main content area is titled 'GitHub Pages' and shows that GitHub Pages is currently disabled. Under the 'Build and deployment' section, the 'Source' is set to 'Deploy from a branch'. The 'Branch' dropdown is set to 'None' and is highlighted with a red box and a circled '3'. A 'Select branch' modal is open, showing a search bar and a list of branches. The 'main' branch is highlighted with a red box and a circled '4'. A 'Save' button is visible next to the 'None' dropdown.

Branch

GitHub Pages is currently disabled. Select a source below to enable GitHub Pages for this repository. [Learn more about configuring the publishing source for your site.](#)

main / (root) **Save** ⁵

Branch

Your GitHub Pages site **is currently being built** from the main branch. [Learn more about configuring the publishing source for your site.](#)

main / (root) Save

After some minutes and F5:

The screenshot shows the GitHub repository status page. It displays the message 'Your site is live at <https://fdg-2026.github.io/webtst/>'. Below this, it says 'Last deployed by fdg-2026 2 minutes ago'. There are two buttons: 'Visit site' and 'Unpublish site'.

Step 4: Clone Web Repository to your PC

```
PS C:\flutter\code\fdg-2026> git clone https://github.com/fdg-2026/webtst.git
Cloning into 'webtst'...
remote: Enumerating objects: 3, done.
remote: Counting objects: 100% (3/3), done.
remote: Compressing objects: 100% (2/2), done.
remote: Total 3 (delta 0), reused 0 (delta 0), pack-reused 0 (from 0)
Receiving objects: 100% (3/3), done.
```

Step 5: Build and publish the web app

```
> build_web_app.ps1 > ...
1  $projectName = "flutter_euro_exchange_chart"
2  $webRepoName = "webtst"
3  #$dest = "..\${webRepoName}\${projectName}"
4  $dest = "C:\flutter\code\fdg-2026\${webRepoName}\${projectName}"
5
6  Write-Output "building web app ..."
7  flutter build web --base-href /${webRepoName}/${projectName}/
8
9  if (Test-Path -Path $dest -PathType Container) {
10     Write-Output "deleting destination $dest"
11     Remove-Item -Path $dest -Recurse
12 }
13 Write-Output "copying web app to $dest"
14 Copy-Item -Path "build\web" -Destination $dest -Recurse
15
16 Pause
17
18 Push-Location
19 Set-Location $dest
20
21 Write-Output "performing git commit ..."
22 git add .
23 git commit -m "new delivery of ${projectName}"
24
25 Write-Output "performing git push ..."
26 git push
27
28 Pop-Location
```

Terminal Output of the script:

```
● PS C:\flutter\code\fdg-2026\flutter_euro_exchange_chart> .\build_web_app.ps1
building web app ...
Wasm dry run succeeded. Consider building and testing your application with the `--wasm` flag. See docs for more
info: https://docs.flutter.dev/platform-integration/web/wasm
Use --no-wasm-dry-run to disable these warnings.
Compiling lib\main.dart for the Web... 55,0s

448449c..99929a5 main -> main
```

Step 6: Wait till publish action is completed

The screenshot shows the GitHub Actions interface for the repository 'webtst'. The 'Actions' tab is selected and highlighted with a red box and a circled '1'. Below the navigation bar, the 'All workflows' section is visible. A search bar labeled 'Filter workflow runs' is present. Under '2 workflow runs', the workflow 'pages build and deployment' is listed, highlighted with a red box and a circled '2'. The workflow is shown as 'Queued' on the 'main' branch, triggered by a 'now' event, and created by 'fdg-2026'.

Step 7: Final test if deployment worked

https://fdg-2026.github.io/webtst/flutter_euro_exchange_chart/

Step 8: Add a link to the uploaded app in README.md

```
README.md M ●
README.md > abc # webtst
1 # webtst
2
3 In this repository we will publish the flutter web apps that were created
4 during our training in 2026:
5 - [flutter_euro_exchange_chart](https://fdg-2026.github.io/webtst/
6   flutter_euro_exchange_chart/)
```

We can use Gemini to convert our Powershell script into a batch file (<https://gemini.google.com/share/5604f650aee1>)

```
> build_web_app.ps1 > ...
1 $projectName = "flutter_euro_exchange_chart"
2 $webRepoName = "webtst"
3 #$dest = "..\${webRepoName}\${projectName}"
4 $dest = "C:\flutter\code\fdg-2026\${webRepoName}\${projectName}"
5
6 Write-Output "building web app ..."
7 flutter build web --base-href /${webRepoName}/${projectName}/
8
9 if (Test-Path -Path $dest -PathType Container) {
10     Write-Output "deleting destination $dest"
11     Remove-Item -Path $dest -Recurse
12 }
13 Write-Output "copying web app to $dest"
14 Copy-Item -Path "build\web" -Destination $dest -Recurse
15
16 Pause
17
18 Push-Location
19 Set-Location $dest
20
21 Write-Output "performing git commit ..."
22 git add .
23 git commit -m "new delivery of ${projectName}"
24
25 Write-Output "performing git push ..."
26 git push
27
28 Pop-Location
```

```
build_web_app.bat
1 @echo off
2 set "projectName=flutter_euro_exchange_chart"
3 set "webRepoName=webtst"
4 set "dest=C:\flutter\code\fdg-2026\%webRepoName%\%projectName%"
5
6 echo building web app ...
7 call flutter build web --base-href /%webRepoName%/projectName%/
8
9 if exist "%dest%" (
10     echo deleting destination %dest%
11     rd /s /q "%dest%"
12 )
13
14 echo copying web app to %dest%
15 xcopy "build\web" "%dest%" /E /I /H /Y
16
17 pause
18
19 pushd "%dest%"
20
21 echo performing git commit ...
22 git add .
23 git commit -m "new delivery of %projectName%"
24
25 echo performing git push ...
26 git push
27
28 popd
```
